USB Box for digital satellite reception on a notebook or PC

# TechniSat SkyStar USB HD

USB Box for digital satellite reception on a notebook or PC

The SkyStar USB HD is an external satellite receiver for PC and laptop. The compact box, equipped with an USB 2.0 interface, makes it possible to receive unencrypted television and radio channels, even in HD quality. Now you can experience television in a new dimension, with the new SkyStar USB HD. In addition to standard TV and radio channels, the USB Box allows you to receive the brilliant world of picture and sound of the new high-definition television service.

## High-Definition Television (HDTV)

HDTV offers television enjoyment of a quality you have never experienced. The crystal-clear pictures are richer in detail, the colours are fuller and the contours sharper. The high-quality sound provides excellent room-filling tones.

## First-Class Equipment

The SkyStar USB HD brings convenience to television and radio enjoyment. The Box is equipped with a powerful and easy-to-operate reception and playback tool (TechniSat DVBViewer TE2), the first-class electronic handy programme information service EPG and a wide range of other attractive features.

TV and radio broadcasts can be easily recorded using the DVR function and then played back using the TIMESHIFT feature at any time. The recordings can easily be processed using the EVE v2 video editing software, which is included with the equipment. This allows you to remove blocks of adverts, for example, and easily to add effects. Overall, the SkyStar USB HD offers the range of functions and convenience of a fully-fledged HDTV hard drive receiver

## Features
